

# PIPING & CONTAINMENT

## UPP Semi-Rigid Pipework System

The UPP semi-rigid pipework system provides the ultimate in ease of installation and reliability. It's flexibility makes long pipe runs easy to install around site obstacles while its rigid characteristics make straight runs between dispenser sumps a breeze. The electrofusion welding process is simply carried out to maximize installers time and efficiency while ensuring a watertight piping system for years to come.

### Features

- Simple pipe prep and electrofusion welding installation process
- Durable enough to withstand wear during installation
- Won't kink or crack if hit by equipment on the job site
- Available in both coils and straight sticks
- Zero leak paths protect contractors down the road
- UL971 approved
- CARB approved for vapor recovery applications
