CARB CERTIFIED DEFENDER SERIES® OPV

Defender Series® Overfill Prevention Valves (OPV) have received certification from the California Air Resources Board (CARB) under Executive Order VR-101. After passing CARB's rigorous 180-day test, the Defender Series® OPV is now fully available for those markets operating under CARB regulations.

NO PENETRATIONS

The revolutionary magnetically-coupled actuator system allows the Defender Series® OPV to achieve positive shutoff without a single penetration in the valve body.

VAPORTIGHT

Every unit is factory tested for 100% vapor tightness to ensure a clean, fugitive emission-free forecourt and eliminate potential leak paths for escaping vapors.

SIMPLE INSTALLATION

Installation requires no flaring, riveting, or epoxying drop tubes on site. The Defender Series® OPV utilizes an error proof roll-crimp and thread installation method to achieve a perfectly in-line installation.

EASY TESTING

Defender Series® OPVs can be tested for functionality without removing them from the riser, allowing visual inspection to be conducted by a single person.
