Model 515-516 Brass Vertical Check Valves

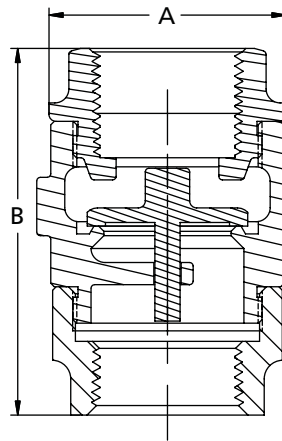

EBW's Vertical Check Valves are used on suction system fuel lines to maintain prime. EBW's Vertical Check Valves are installed directly below the dispenser pumping unit. EBW offers both single and double poppet models. Double poppet models offer twice the protection from losing prime.

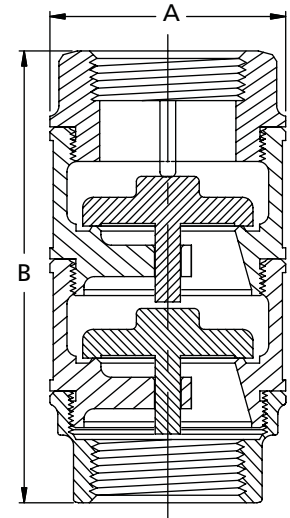

Design Highlights & Advantages

- Metal to metal poppet seating.
- All valves are pressure tested to ensure accuracy.

MATERIALS
Body: Brass
Poppet: Brass
Seat: Brass

SINGLE POPPET

DOUBLE POPPET
