Dispensing Systems Nozzle Spare Parts

Franklin Fueling Systems (FFS) manufactures and markets a complete line of Stage II Vapor Recovery Systems globally under the Healy product brand within the Dispensing Systems product line. As FFS continues to develop the Dispensing Systems product line, we continually look for opportunities to improve the offering. In conjunction with the release of our new product catalog on August 11 2008, FFS will improve our spare parts offering across all nozzle models.

In the past, spare parts for Dispensing Systems nozzles were offered separately and in limited partial kits. Moving forward, spare parts for Dispensing Systems nozzles will be offered in complete kits. Complete kits provide the technician with everything needed for a repair within a category, thus preventing a return trip with additional parts or the reuse of parts that should be replaced as part of the repair. Complete kits have been developed within three repair categories: Boot Repair, Spout Repair, and Lever Repair.

Depending on the nozzle model, the Boot Repair Kit includes a vapor escape guard (VEG) or a complete boot assembly, provided with face seal attached with a face seal wire, and the appropriate boot clamp.

Since the boot needs to be removed to repair a spout, the Spout Repair Kit includes a complete spout assembly, provided with spout o-rings and spout screw, as well as a complete Boot Repair Kit.

Since the many parts need to be removed to make repairs to the lever area of a nozzle, the Lever Repair Kit includes a lever cover, a hand-guard, and a complete hold-open kit, which is provided with lever assembly, the 2-position hold-open clip, and all the associated hardware for attachment of all the components within this kit.

Handle Cover and Scuff-guards are not provided in any of the complete Repair Kits and will continue to be offered separately for all nozzle models.

For complete details of the nozzle spare parts offering, please see the Dispensing Systems Product Catalog p/n FFS-0065. For any questions regarding this bulletin or the Dispensing Product line, please contact the FFS Technical Service or Customer Support.
